Permission to work in Japan required

Job Description

We are seeking a hands-on Product Manager who operates seamlessly across product management, UI/UX design, and enterprise data-driven products.

This role is intentionally hybrid. You will own the end-to-end experience of the product UI, from problem discovery and interaction design through delivery and post-launch optimization. While you will collaborate with engineers and other PMs, you must be capable of independently designing high-quality prototypes using modern, AI-assisted design tools.

This role is best suited for a Product Manager who:

Thinks like a designer
Designs like a product owner
Makes decisions grounded in data

【Responsibilities/ 担当業務】
■Product & UX Ownership
Own the vision, strategy, and roadmap for the Rakuten Analytics user experience.
Translate complex analytics and data requirements into clear, intuitive prototypes.
Define success metrics and continuously optimize UX based on usage data and feedback.

■Hands-On Design & Prototyping
Independently create wireframes, high-fidelity mockups, and interactive prototypes.
Leverage AI-assisted tools (e.g., Figma AI, Cursor, etc.) to accelerate design and iteration.
Validate concepts quickly through prototypes before engineering investment.
Note: Designer support is limited. Strong independent design capability is required, not optional.

■Cross-Functional Execution
Partner closely with engineers to ensure designs are feasible, scalable, and well-implemented.
Write clear PRDs, user stories, and acceptance criteria with strong UX intent.
Advocate for UX priorities during planning, grooming, and sprint reviews.

■Analytics & Data Fluency
Understand and work confidently with analytics concepts, including:
Event tracking
Funnels
Dimensions & metrics
Basic SQL or query-based data exploration
Monitor feature adoption, behavioral trends, and KPIs to guide product decisions.

■Standards, Quality & Compliance
Build and maintain design systems and reusable UI components.
Ensure compliance with accessibility (WCAG) and data privacy standards (GDPR, APPI).
Support localization and internationalization requirements across markets.

■Market Awareness
Conduct competitive analysis across leading analytics platforms (e.g., GA, Amplitude, Adobe Analytics).
Stay current on SaaS UX trends, analytics tooling, and AI-assisted design workflows.

Required Skills

- Experience working on enterprise SaaS products with 5,000+ MAUs.
- 5+ years of experience in Product Management, with substantial ownership of user-facing features.
- Proven ability to independently design and prototype modern web interfaces.
- Hands-on experience using AI-assisted design or development tools.
- Strong grasp of:
  + Usability and interaction design principles
  + Accessibility standards (WCAG)
  + Data-driven product development
- Familiarity with analytics platforms such as Google Analytics, - Amplitude, or Adobe Analytics.
- Experience supporting multi-language / global products.
