### Job Description

Develop and maintain high-performance backend microservices for an e-commerce platform, building new features and services that enhance customer value while handling large-scale traffic and data volumes. Collaborate with engineering teams to improve productivity, drive system ownership, and promote a culture of innovation, quality, and reliable service delivery.

#### Client Details

The company is a large organization known for its innovative contributions to the technology & telecoms industry. They provide employees with modern facilities, a professional work culture, and a focus on delivering cutting-edge solutions.

#### Description

- Design, build, and maintain scalable backend microservices for e-commerce systems handling high traffic and large data volumes
- Develop and enhance features related to customer rewards, order processing, and overall platform functionality

- Collaborate with cross-functional engineering teams to improve developer productivity and system performance
- Take ownership of system components while promoting best practices in quality, innovation, and reliable service delivery

#### **Job Offer**

- Opportunity to work in a leading organization in the technology & telecoms industry.
- One day of work-from-home flexibility each week.
- Free lunch provided in the office.
- Engaging projects and a supportive team environment.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.
