Job Description

We are seeking an experienced Software QA Engineer to drive quality across distributed systems by designing comprehensive test strategies and implementing robust automation frameworks. The role involves end-to-end testing, defect management, and CI/CD integration, ensuring high product reliability in an Agile environment.

Client Details

This organization is a medium-sized player in the business services industry, with a focus on delivering innovative technology solutions. They are committed to excellence and are seeking passionate professionals to enhance their team in Tokyo.

Description

- Design and execute comprehensive test plans, including automated frameworks, to ensure high-quality delivery across distributed systems.
- Perform functional, integration, regression, and performance testing while supporting CI/CD pipelines with reliable quality gates.
- Identify, document, and track defects, collaborating closely with engineering teams to drive timely resolution.
- Apply strong QA expertise within Agile environments, leveraging API testing, microservices knowledge, and modern

automation tools.

Job Offer

- Engage in impactful projects within the business services industry.
- Enhance your professional skills in a collaborative environment.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

Required Skills

- Proficient English with a Bachelor's degree in Computer Science or a related field.
 - 5+ years of hands-on experience in Software Quality Assurance, with a strong focus on testing distributed systems or microservices.
 - Proven expertise in test automation using tools such as Selenium, JUnit, or Playwright, along with solid API testing experience.
 - Strong understanding of Agile/Scrum methodologies, SDLC, and CI/CD practices, with excellent problem-solving and collaboration skills.
