#### Job Description

We are hiring a senior DevOps engineer to design and enhance an internal developer platform that enables fast, reliable delivery of high-quality e-commerce services. The role focuses on building scalable infrastructure, automating CI/CD workflows, and improving developer experience through collaboration, tooling, and continuous optimization.

**Client Details**

This organization is a large enterprise in the retail industry, renowned for its innovative approach to technology. It offers a professional environment designed to support the success of its team members.

**Description**

- Design and build scalable internal platforms to support fast, high-quality software delivery.
- Integrate and automate developer workflows using CI/CD, cloud infrastructure, and monitoring tools.
- Collaborate with cross-functional teams to define requirements, improve developer experience, and drive platform adoption.

- Continuously optimize system reliability, performance, and security while contributing to technical strategy and architecture decisions.

#### Job Offer

- Competitive salary
- Complimentary meals at the cafeteria.
- An opportunity to work in Tokyo, a global hub for innovation and business.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

---

#### Required Skills

- 7+ years of experience in DevOps, platform, or software engineering with strong infrastructure and tooling expertise.
  - Proven ability to design and maintain developer platforms, CI/CD pipelines, and cloud-based systems (AWS, Azure, or GCP).
  - Hands-on experience with containerization and orchestration tools such as Docker and Kubernetes, along with Infrastructure as Code.
  - Strong communication, ownership, and collaboration skills, with the ability to drive improvements and support cross-functional teams.
- 

#### Company Description
