Permission to work in Japan required

Job Description

This role leads quality assurance across modern, distributed systems with a strong focus on automation and CI/CD integration. You will shape testing strategy, improve coverage, and partner closely with engineering to deliver reliable software at scale.

Client Details

Our client is a well-established IT services and engineering organization supporting enterprise-scale digital platforms across multiple industries. The environment is technically rigorous, Agile-driven, and focused on building resilient, high-availability systems.

Description

- Validate user stories and requirements to create clear, comprehensive test plans and test cases
- Design, develop, and maintain automated test frameworks to increase test coverage and efficiency
- Execute functional, integration, regression, and performance testing across distributed systems
- Identify, document, and track defects, working closely with developers through resolution
- Integrate automated tests into CI/CD pipelines to enforce quality gates and fast feedback
- Contribute to continuous improvement of QA processes, tools, and best practices

Job Offer

- Opportunity to work on large-scale, modern systems with real business impact
- High level of ownership and influence over QA and automation practices
- Collaborative, international engineering environment
- Long-term growth and skill development in advanced testing and DevOps practices

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

Required Skills

- Fluent English proficiency for daily collaboration and documentation
- Bachelor's degree in Computer Science or a related technical field
- 5+ years of experience in Software Quality Assurance
- Strong hands-on experience testing distributed systems and microservices architectures
- Proven expertise with test automation tools such as Selenium, JUnit, or Playwright
- Solid experience with API testing tools (e.g., Postman, RestAssured)
- Good understanding of SDLC and Agile/Scrum methodologies

Desired skills:

- Business-level Japanese communication skills
 - Performance testing experience using tools such as JMeter, Gatling, or k6
 - Exposure to containerized environments (Docker, Kubernetes)
 - Familiarity with BDD frameworks (e.g., Cucumber) and database validation (SQL/NoSQL)
-
