Job Description

About the Company

We are currently looking for a **Senior Software Engineer** to join a fast-growing travel technology company that is **changing hospitality for the better** across Asia by helping hotels connect directly with their guests.

The company is financially **stable** and profitable, while still retaining the speed, ownership, and flexibility of a **startup**. It is an **international** environment where **English** is the primary working language, and where you can interact **directly** with executives, allowing your ideas to influence products, technology, and business outcomes.

Who are you

- You are an experienced software engineer who enjoys solving **complex technical challenges** and **driving**

transformation.

- You are excited by the challenge of **evolving high-traffic, mission-critical systems** and **shaping the future architecture** of the platform without disrupting a live business.
- You enjoy **mentoring** other engineers and **partnering** with product managers and stakeholders to translate business challenges into technical solutions.

Why should you apply

- **Lead the evolution** of a business-critical platform from a monolith to a modern service-oriented architecture.
 - Strong **opportunities** for **technical leadership** and **career growth**.
 - Work in an international, **English-speaking** team with a **flat** organizational structure and direct **access** to leadership.
-

Required Skills

- Strong experience with modern **statically-typed programming** languages (Go, Kotlin, Scala, Rust, or C#).
- Experience working with **monolithic** codebases, as well as **microservices** architectures.
- Experience with **CI/CD pipelines** and **zero-downtime** deployment strategies.
- Experience with **cloud** infrastructure and **monitoring** tools.
- Strong communication skills in **English**.

Desired Skills

- Experience with **Ruby / Ruby on Rails**.
 - **Japanese** language ability.
-
