Bachelor's Degree

Visa Status

Permission to work in Japan required

Job Description

Join a senior engineering team building high-performance backend systems for a global advertising platform. You will lead design and development of scalable microservices while ensuring reliability and continuous improvement.

Client Details

Our client is a large, global technology company operating a leading performance marketing and advertising platform. With distributed engineering teams across multiple countries, they deliver data-driven solutions that connect advertisers and publishers at scale.

Description

- Design, develop, and maintain scalable backend services and APIs using Java (Spring Boot) in a microservices architecture
- Translate complex business requirements into robust technical designs and clean, efficient code
- Own the full development lifecycle: architecture, development, testing, deployment, and operations
- Ensure system stability by identifying root causes and leading issue resolution
- Collaborate cross-functionally with product and engineering teams in an international environment
- Propose and implement new technologies to improve system performance and development efficiency

Job Offer

- Opportunity to lead backend architecture in a large-scale, global platform
- Work with diverse, international teams across multiple regions
- Exposure to modern technologies including cloud, microservices, and DevOps

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

Required Skills

- 5+ years of experience in Java development within microservices environments
- Strong experience with REST APIs, OpenAPI, ORM frameworks, and database schema design
- Advanced SQL skills, including complex queries and performance considerations
- Proven ability to evaluate technical trade-offs and design scalable systems
- Experience with unit testing frameworks (e.g., JUnit)
- Bachelor's degree in Computer Science or a related technical field
- Business-level English proficiency

Nice to have:

- Experience with cloud platforms (preferably GCP)
 - Knowledge of performance tuning across infrastructure, OS, DB, and application layers
 - Familiarity with Docker, Kubernetes, and CI/CD pipelines (e.g., Jenkins)
 - Frontend experience (TypeScript, React, Next.js, etc.)
-
