Permission to work in Japan required

Job Description

Join a large-scale digital services group to lead the design and development of high-quality Android applications used by millions. You will collaborate across teams to deliver performant, scalable features using modern Android technologies.

Client Details

Our client is a large, technology-driven digital platform company in Japan, operating multiple consumer services within a broad ecosystem. The organization is known for building high-traffic applications and investing in modern mobile engineering practices.

Description

- Lead design and development of advanced Android applications using Kotlin and Jetpack Compose
- Drive architecture decisions using MVVM and Clean Architecture principles
- Collaborate with cross-functional teams to define, design, and release new features
- Integrate Android applications with RESTful APIs (e.g., Retrofit)
- Ensure robustness through comprehensive unit testing and best practices
- Optimize app performance, fix bugs, and improve reliability
- Contribute to and lead code reviews and continuous development process improvements

- Participate across the full development lifecycle: requirements, design, coding, testing, deployment
- Work within Agile/Scrum environments to deliver high-quality releases

Job Offer

- Opportunity to lead and influence Android development in a large-scale ecosystem
- Exposure to modern mobile technologies and best practices
- Collaborative and international engineering culture

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

Required Skills

- Bachelor's degree in Computer Science, Engineering, or related field
- 5+ years of Android development experience with at least one published app
- Strong proficiency in Kotlin and Jetpack Compose
- Solid experience with Android SDK and REST/JSON-based integrations
- Hands-on experience with Retrofit and third-party library integration
- Deep understanding of MVVM and Clean Architecture
- Experience with unit testing frameworks and CI/CD pipelines
- Familiarity with version control systems such as Git
- Strong understanding of mobile development lifecycle and trends
- Business-level English proficiency (e.g., TOEIC 800+)

Preferred Qualifications:

- Experience with push notifications and cloud messaging APIs
 - Understanding of Android design guidelines and UI best practices
 - Strong problem-solving skills and attention to detail
 - Leadership or project management experience
 - Ability to work independently in a multinational team environment
