Job Description

EIRE Systems is working with an international Data Center Services company, a recent entrant shaping the future of the

.....
Tokyo hyper-scale data center market.

We're seeking to hire a consultant Network Engineer to design and build network infrastructure from the ground up—supporting corporate IT, facility systems, and physical security platforms in a brand-new DC environment. This is not BAU. This is a true greenfield project where you'll own design decisions and see your work go live.

What You'll Do

- Design core, access, and OOB network architecture for a new data center platform
- Build networks supporting IT, BMS, access control, and security systems
- Work closely with vendors, carriers, and construction teams to deliver the build
- Lead design reviews, validate installations, and support commissioning
- Ensure everything is ready for handover into operations

What We're Looking For

- Solid experience in network engineering (L2/L3, routing, switching)
- Experience in data center environments (design or deployment)
- Ability to work in project-based, multi-vendor builds
- Strong communication skills; able to coordinate across stakeholders

Why Join

- Greenfield build in a high-growth hyperscale market
- Full lifecycle exposure: design → build → go-live
- Work on critical infrastructure beyond IT (facilities + security systems)
- Opportunity to make a real impact in a new DC platform in Japan

Location: Tokyo area

Language: English required; Japanese a strong plus

*****Applicants must presently be residing in Japan with permission to work full-time in Japan.**

Required Skills

Skills & Experience

- Business Level Japanese language skills (professional level verbal communications as the minimum requirement)
- Experience managing Windows infrastructure (Active Directory, DHCP, DNS)
- Microsoft 365 / Azure AD administration knoweldge
- Networking knowledge and hands-on experience (L2/L3 switching, firewalls, wireless)
- Experience managing VMware vSphere / ESX environment
- Scripting and automation (PowerShell, VBScript)
- Strong understanding and implementation of IT security best practice
- Vendor management and IT project management experience will add value

*****Applicants must presently be residing in Japan. Applicants from outside Japan need not apply and will not be contacted.**
