Job Description

COMPANY OVERVIEW

Our client is a leading regional technology integrator known for operating at the intersection of complex engineering, digital transformation, and critical infrastructure.

They are looking for someone that will be responsible for building, automating, deploying, and supporting modern cloud-native platforms. You will work closely with software, infrastructure, and security teams to deliver scalable and secure services using DevOps, GitOps, CI/CD, Kubernetes, and Infrastructure-as-Code practices.

JOB RESPONSIBILITIES

- Support and maintain platform services using GitOps.
- Build and enhance CI/CD pipelines for application and infrastructure deployments.
- Automate operational processes using scripting and Infrastructure as Code (IaC).
- Monitor platform performance, troubleshoot issues, and conduct root cause analysis.

- Manage deployments across development, testing, and production environments.
- Support containerized applications and Kubernetes-based platforms.
- Implement observability solutions for logging, monitoring, and tracing.
- Participate in incident management and continuous service improvement.
- Ensure compliance with security and operational standards.
- Maintain technical documentation and operational runbooks.

JOB REQUIREMENTS

- Bachelor's Degree in Computer Science, Software Engineering, Information Technology, or a related discipline.
- 2 to 6 years of experience in Software Engineering, DevOps, Platform Engineering, or a related field.
- Knowledge of container technologies (Docker) and Kubernetes-based platforms.
- Familiarity with Infrastructure-as-Code tools such as Terraform or Ansible.
- Proficiency in Git, CI/CD pipelines, and software development lifecycle (SDLC) practices.
- Hands-on experience with Linux environments and scripting languages such as Python, Bash, or Shell.
- Understanding of GitOps methodologies and related tools (e.g., Argo CD, Flux) is advantageous.
- Experience with monitoring and observability tools such as Prometheus, Grafana, Elastic Stack, or OpenTelemetry is preferred.
- Good understanding of networking fundamentals, REST APIs, and security best practices.
- Strong analytical, troubleshooting, and communication skills with the ability to work effectively in cross-functional teams.
- Self-motivated, adaptable, and passionate about cloud-native technologies, automation, and continuous learning.
