Associate Degree/Diploma

Visa Status

No permission to work in Japan required

Job Description

We're Hiring: Senior Platform Engineer (Kubernetes / AWS / DevEx)

Are you passionate about building platforms that engineers love to use?

We're working with a fast-growing tech company that's evolving from a monolith to a modern, service-oriented architecture, and they're looking for a **Senior Platform Engineer** to help lead that transformation.

Key Responsibilities:

This isn't just about managing infrastructure. You'll help build a **self-service developer platform** that allows engineers to go from idea → production in minutes (not weeks).

You will:

- Build reusable **Terraform modules, CI/CD components, and platform abstractions**
- Design systems that simplify complexity and improve **developer experience**

- Shape the future of the platform: **Kubernetes, observability, and architecture decisions**
- Partner with engineering teams to support the move away from a monolith
- Define best practices for **reliability, monitoring, and “you build it, you run it” culture**
- Mentor teammates and influence engineering standards

Requirements:

- Experience building **internal platforms / developer tooling**
- Strong Kubernetes (EKS) knowledge — networking, RBAC, scaling
- Solid Terraform skills (modular, reusable design)
- CI/CD expertise (GitHub Actions, ArgoCD, DroneCI, etc.)
- Hands-on with AWS: EKS, IAM, VPC, RDS
- Deep understanding of **observability** (Prometheus, Grafana, OpenTelemetry)
- Strong grasp of **security, networking, and system design at scale**
- Experience running production systems + incident response
- A mindset focused on **developer experience and usability**

Why You’ll Love This Role

- Build a platform that directly impacts how engineers work every day
- Work in a **product-driven, profitable company** with steady growth
- Startup agility + enterprise-level scale
- Collaborate with an **international team** and leadership directly
- High ownership, real impact, and room to shape long-term architecture

Who This Is Perfect For

- Platform Engineers, SREs, DevOps Engineers who enjoy building systems for other engineers
- Engineers who care deeply about **developer experience, not just infrastructure**
- Problem solvers who like shaping systems in **ambiguous, high-impact environments**
