Job Description

Senior Java Developer responsible for designing and building secure, scalable applications and RESTful APIs using Java and Spring Boot. The role focuses on system design, database optimization, Docker-based deployments, and collaboration with cross-functional teams to deliver high-quality solutions.

Client Details

The company is a large organization in the technology & telecoms industry with a strong presence in Tokyo. It specializes in delivering innovative solutions and services, fostering a culture of excellence and growth.

Description

- Lead the design, development, and maintenance of secure, scalable Java applications using Spring Boot and the Spring Framework.
- Design and implement RESTful APIs, ensuring high performance, reliability, and seamless system integration.
- Manage application deployment using Docker, optimize SQL/database performance, and apply software design

patterns for clean, maintainable code.

- Collaborate with cross-functional teams to gather requirements, solve technical issues, and deliver high-quality solutions in a fast-paced environment.

Job Offer

- Free office meals provided for all employees.
- Opportunity to work in a large organization in the technology & telecoms industry.
- Collaborative work environment with exposure to innovative projects.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

Required Skills

- Strong experience in Java development with hands-on expertise in Spring Boot, Spring Framework, and RESTful API design.
 - Solid understanding of application security best practices, software design patterns, and writing clean, maintainable code.
 - Proven experience with Docker containerization, relational databases, and SQL performance optimization.
 - Strong communication and problem-solving skills, with the ability to collaborate effectively in an English-speaking, cross-functional environment.
