Job Description

Join a fast-paced engineering environment developing incentive and payment systems used across a global digital ecosystem. This role focuses on building scalable, secure backend services using modern Java technologies.

Client Details

A large, globally recognized technology and fintech organization operating digital platforms across multiple markets. The company focuses on expanding its ecosystem through advanced engineering and scalable platform solutions.

Description

- Design, develop, and maintain scalable Java applications using Spring Boot and Spring Framework
- Develop RESTful APIs to enable integration between systems and services
- Apply security best practices throughout the development life-cycle
- Use container technologies such as Docker for application deployment
- Work with relational databases and write efficient SQL queries
- Apply design patterns to create maintainable and reusable code
- Work with internal stakeholders to define requirements and deliver solutions
- Troubleshoot and improve application performance and reliability

- Keep up to date with developments in Java and related technologies

Job Offer

- Work on large-scale global systems
- Exposure to modern engineering environments and cloud technologies
- International working environment with English as the primary language
- Career growth in a global technology organisation
- Hybrid work model in Tokyo

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Kayo Tojo +81366276145.

Required Skills

- Strong Java development experience
- Hands-on experience with Spring Boot and Spring Framework
- Knowledge of application security principles
- Experience designing and implementing REST APIs
- Experience using Docker or similar container tools
- Solid SQL and relational database knowledge
- Understanding of design patterns and software architecture
- Business-level English proficiency

Nice to have:

- Experience with AWS or other cloud platforms
 - Understanding of microservices and distributed systems
-

Company Description

A global technology company operating digital platforms across e-commerce, payments, and online services. Provides large-scale systems used by millions of users worldwide, with an international, English-speaking engineering environment.
