Job Description

This role focuses on leading the basic design and development of scalable, secure Java-based applications powering global incentive and payment platforms. You will collaborate across teams to deliver high-performance REST APIs and drive best practices in modern software engineering.

Client Details

A large, globally recognized technology company operating in the e-commerce and fintech space. Their platforms support millions of users worldwide, driving innovation in payments, rewards, and digital services at scale.

Description

- Lead the design, development, and maintenance of robust Java applications using Spring Boot and the Spring Framework
- Architect and implement RESTful APIs for seamless integration across systems
- Ensure security best practices are embedded throughout the development lifecycle
- Utilize containerization tools (e.g., Docker) for efficient deployment and scalability
- Design and optimize relational database structures and SQL queries
- Apply software design patterns to create maintainable and reusable code

- Collaborate with cross-functional stakeholders to gather requirements and resolve technical challenges
- Stay updated on Java ecosystem advancements and emerging technologies

Job Offer

- Opportunity to take a lead role in system design for large-scale platforms
- Exposure to global products with high user impact
- Collaborative, international engineering environment

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

Required Skills

- Strong proficiency in Java development
- Extensive experience with Spring Boot and the Spring Framework
- Solid understanding of application security best practices
- Proven experience designing and developing RESTful APIs
- Hands-on experience with Docker or similar container technologies
- Strong knowledge of relational databases and SQL
- Good understanding of software design patterns and clean architecture

Preferred Qualifications:

- Experience with AWS or other cloud platforms
- Familiarity with microservices architecture and distributed systems
- English: Business level (e.g., TOEIC 800+)
- Japanese: Not required

Company Description

A large, globally recognized technology company operating in the e-commerce and fintech space. Their platforms support millions of users worldwide, driving innovation in payments, rewards, and digital services at scale.
