Bachelor's Degree

Visa Status

Permission to work in Japan required

Job Description

Join a high-impact engineering team building secure, scalable payment APIs used across a global digital ecosystem. You will contribute end-to-end across design, development, and operation of Java-based microservices in a fast-paced, collaborative environment.

Client Details

Our client is a large, globally recognized technology and internet services group operating a diverse digital ecosystem. Their platform division builds and runs the core infrastructure and payment systems that power multiple high-traffic services worldwide.

Description

- Design, develop, test, and deploy Java-based payment applications and RESTful APIs
- Contribute to scalable and secure microservices architecture
- Collaborate with engineers, product managers, and stakeholders to meet business needs
- Participate across the full SDLC, from requirements to production support
- Identify performance bottlenecks and improve system reliability and scalability
- Integrate third-party services and ensure secure data exchange

- Maintain and create technical documentation
- Conduct code reviews and follow best practices (Git, Agile, design patterns)
- Apply performance tuning and optimization techniques
- Continuously evaluate new tools, technologies, and engineering practices

Job Offer

- Opportunity to work on high-scale, real-world payment systems
- Collaborative, international engineering environment
- Exposure to modern microservices and cloud-native architectures
- Strong focus on security, performance, and best practices
- Career development within a large, tech-driven organization

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

Required Skills

- Experience as a Software Engineer with strong Java and SQL skills
- Hands-on experience with Spring Boot and Spring Framework
- Front-end fundamentals (HTML, CSS, JavaScript) for full-stack contribution
- Experience designing and developing RESTful APIs
- Knowledge of microservices architecture and best practices
- Understanding of secure coding and application security principles
- Experience with version control (Git) and Agile methodologies
- Familiarity with performance optimization and scalability techniques

Preferred Skills

- Exposure to AI prompt engineering or AI-assisted coding tools
 - Experience with cloud platforms (e.g., AWS)
 - Knowledge of Docker, Kubernetes, and container orchestration
 - Familiarity with distributed tracing and monitoring tools
 - Experience in e-commerce platforms or high-traffic systems
 - Testing experience (unit, integration, performance)
 - Open-source contributions or technical community involvement
