Job Description

Position Summary

We are seeking a Network Infrastructure Engineer to support the design, implementation, operation, and maintenance of network solutions for enterprise clients. This role is responsible for delivering high-quality network infrastructure services, working closely with customers to understand business requirements and provide reliable, scalable, and secure networking solutions.

Key Responsibilities

- Proposing, designing, building, operating, and maintaining network infrastructure for clients hosted within our company's data centers.
- Proposing, designing, building, and deploying network infrastructure related to POS systems, business applications for financial institutions, and similar solutions.
- Designing, building, and deploying network solutions covering areas such as wireless LANs, security, and collaboration tools.

Required Skills

- Individuals capable of gathering requirements through direct consultation with clients.
- Individuals who can take full responsibility for their work and see tasks through to completion.
- Individuals interested in engaging in the construction of general infrastructure systems and the proposal of related services.
- Individuals willing to boldly take on challenges involving new technologies, products, and services; extending beyond just networking.
