#### Job Description

Join a global technology leader as a Data Platform Engineer to build, automate, and operate a scalable, multi-tenant Databricks platform on the cloud that enables enterprise-wide analytics and data-driven innovation. You'll collaborate with cross-functional stakeholders to enhance platform reliability, governance, and self-service capabilities while driving automation and operational excellence across the organization.

#### Client Details

Our client is a leading global technology company with a large-scale digital ecosystem spanning multiple business domains. They are investing in a modern cloud-based data platform to empower hundreds of engineering, analytics, and data science teams through scalable, secure, and self-service infrastructure.

#### Description

- Monitor and maintain system reliability and performance.
- Implement and manage infrastructure automation tools.
- Troubleshoot and resolve system issues efficiently.
- Collaborate with cross-functional teams to improve system architecture.
- Ensure adherence to best practices for system security and compliance.

- Optimize system scalability and resource allocation.
- Document processes and prepare technical reports as needed.
- Participate in on-call rotations to address urgent system concerns.

#### Job Offer

- Opportunity to work in a leading global company.
- Hybrid working arrangement.
- Competitive compensation
- Excellent opportunity for career growth while solving large-scale data platform challenges with real business impact.

---

#### Required Skills

- 5+ years of experience in Data Engineering, Platform Engineering, Infrastructure Engineering, or a related field, including hands-on DevOps or SRE responsibilities.
- Strong expertise administering Databricks at enterprise scale, including workspace management, cluster policies, Unity Catalog, job orchestration, and governance.
- Experience with cloud platforms (preferably GCP) and services such as IAM, networking, object storage, and cloud cost management.
- Hands-on experience with Infrastructure-as-Code using Terraform and building automated CI/CD pipelines.
- Strong scripting and automation skills in Python and/or Bash/Shell.
- Solid understanding of security best practices, including RBAC, secrets management, network isolation, and audit logging.
- Experience implementing observability, monitoring, alerting, incident response, and SRE best practices.
- Excellent communication skills with the ability to work effectively across engineering, analytics, security, and business stakeholders.
- Comfortable leveraging AI-assisted development tools to improve engineering productivity and automation.
