Job Description

A company in the electronic vehicle industry is looking for a **Fullstack Engineer**.

Responsibilities:

- Collaborate with development teams or other organizations to innovate features, manage operations, and fix bugs.
- Lead technical aspects of backend dashboard projects, coordinating with stakeholders to ensure smooth progress and timely deliverables.
- Own the quality of the TerraCharge backend dashboard application.

Why should you apply:

- Project teams are typically composed of a few members per project, enabling hands-on involvement in end-to-end delivery from upstream development through product launch and operations.
- For manufacturing clients, many companies are exploring IoT system implementations as new challenge opportunities. These projects offer immense fulfillment by transforming legacy processes through digital transformation, driving fundamental process reform in manufacturing.
- This position welcomes candidates of all ages

Company Details:

An independent technology services company with over 60 years of history.

The company's strength lies in its broad expertise across a wide range of technical domains, from hardware to software, and its ability to deliver comprehensive, end-to-end solutions to clients.

The organization maintains a friendly and open culture, with a flat structure that encourages clear communication and easy collaboration between managers and colleagues.

Working Hours: 9:00 AM – 6:00 PM (Core hours: 10:00 AM – 3:00 PM, Actual working hours: 8 hours)

Working Style: Hybrid (Remote work ratio of approximately 50%)

Holidays: Saturday, Sunday, and National Holidays, Year-end and New Year Holidays, Paid Holidays, Other Special Holidays

Services/Benefits: Social Insurance / Benefit program / Bento (on Tue, Wed, Thu) / Company Café / Retirement allowance, Childcare leave system etc.

Interview Process: 3 Interviews

Required Skills**Required Skills:**

- Experience building APIs from scratch using Python
- Hands-on experience with AWS Serverless Architecture (AWS Lambda required)
- Experience working as a full stack engineer covering both backend (API) and frontend (React or similar)
- Proficiency in software design and system architecture, with experience leading development tasks and coordination
