Job Description

Randstad Japan is partnered with with one of the largest French Financial Services firm globally. We are looking for a dedicated engineer to join their server team. As a Server Engineer, you will serve as a crucial technical authority, ensuring the stability, security, and efficiency of our IT infrastructure while delivering top-tier support to the business. **You NEED to have experience designing, building / provisioning servers, not just maintenance and administration.**

This role is eligible for candidates based in Japan only (we can help with visa conversion sponsorship).

Key Responsibilities

- Provide expert technical guidance to teammates and direct technical support to the business.
 - Act as a senior Level II, Subject Matter Expert, or Level III engineer to solve complex IT infrastructure issues.
 - Serve as the primary escalation point for team members facing IT infrastructure challenges.
 - Actively monitor client infrastructures and execute preventative measures to avoid disruptions.
 - Collaborate closely with helpdesk, network, and application teams to deliver professional, timely service to clients.
 - Provide internal and client advice to improve system efficiency, stability, and performance.
 - Design and implement innovative technology solutions and projects.
 - Collaborate with the Local Security Officer and Head Office to quickly remediate any cyber security vulnerabilities.
 - Mentor junior teammates to help enhance their technical capabilities.
 - Maintain highly updated and accurate records of the IT infrastructure.
 - Uphold and promote company culture and standards.
 - Remain available via phone outside of standard office hours.
 - Exhibit flexibility with work hours to support business needs, including weekends and public holidays.
 - Perform additional ad-hoc tasks as assigned by management
-

Required Skills

■ Technical Skills & Competencies

- Strong hands-on experience with Microsoft Windows Server and IBM Red Hat Linux technologies.
- Proven experience managing IT infrastructure servers, storage solutions, data backups, and replication.
- Excellent troubleshooting and problem-solving skills.
- Strong hands-on proficiency with virtualization tools, specifically HyperV or VMware.
- Hands-on experience with configuration and automation tools, such as Ansible.
- Strong communication and interpersonal skills to interact effectively at all levels within the company and with clients.
- Demonstrated ability to consistently deliver projects and results within constrained timeframe

■ Qualifications

- 3 to 5+ years of proven experience as an infrastructure engineer, including data center operations.
 - Bachelor's degree in Computer Science or Information Technology
 - Fluent written and spoken English is mandatory. Japanese language skills are a bonus
 - Financial Domain (Preferred): A strong understanding of financial tech stacks, trade floor environments, and data center support is highly preferred.
 - Certifications (Advantage): Holding MCSE, AWS, Azure, or CISSP certifications will be considered a strong advantage.
-
