Job Description

We are seeking an experienced Technical Delivery Manager to lead and coordinate the end-to-end delivery of cloud engineering programmes on Google Cloud Platform. This role requires a balance of strong technical depth across GCP, Kubernetes, Terraform, and AI/ML tooling, combined with outstanding delivery management skills to ensure projects are delivered on time, on scope, and to a high standard.

Job Description - Grade Specific

Key Responsibilities

- Own end-to-end technical delivery of GCP cloud programmes, from initiation through to go-live and hypercare
- Lead cross-functional delivery teams including cloud engineers, IAM specialists, GKE administrators, and ML engineers
- Manage programme roadmaps, delivery plans, RAID logs, and stakeholder reporting at executive and working levels
- Drive Agile/Scrum delivery ceremonies and ensure engineering squads maintain velocity and quality
- Provide technical oversight across GCP workstreams including IAM governance, GKE platform, Vertex AI, and IaC (Terraform/Ansible)
- Act as escalation point for technical delivery blockers and facilitate resolution with architecture and engineering leads
- Coordinate release planning, environment management, and change management processes

- Manage relationships with GCP account teams, third-party vendors, and internal business stakeholders
- Define and track KPIs and SLAs for cloud delivery programmes and platform operations
- Embed DevSecOps practices into delivery teams and champion quality gates throughout the SDLC
- Support pre-sales and solution scoping activities, contributing to technical proposals and effort estimation
- Drive continuous improvement across delivery processes, tooling, and team capability

Required Skills

Required Qualifications:

- 6+ years of technology delivery experience, with at least 3 years managing GCP cloud delivery programmes
- Solid technical background spanning GCP services, Kubernetes/GKE, Terraform, Ansible, and CI/CD
- Demonstrated experience leading cross-functional teams of 8+ engineers in a fast-paced environment
- Strong understanding of GCP IAM, security principles, and compliance requirements in cloud delivery contexts
- Experience with Agile, Scrum, and SAFe delivery frameworks and associated tooling (Jira, Confluence)
- Excellent stakeholder management skills with the ability to communicate technical concepts to non-technical audiences
- Understanding of cloud financial management, cost optimisation, and budgetary governance
- Familiarity with Vertex AI and ML delivery pipelines at an oversight level

Preferred Qualifications:

- Google Professional Cloud Architect or Cloud DevOps Engineer certification
- PMP, PRINCE2, or equivalent project management qualification
- Experience delivering Vertex AI or data platform programmes
- Background in managed services, professional services, or systems integration
- Experience with FinOps practices and GCP cost management tooling
- Familiarity with GKE platform engineering and container delivery patterns
