Job Description

Join a dynamic engineering team responsible for developing and maintaining scalable web and mobile applications that support business-critical digital services. This role combines front-end and back-end development, offering the opportunity to build high-quality, user-focused solutions while collaborating with cross-functional teams.

Client Details

Our client is a global technology-driven organization focused on delivering innovative digital solutions and large-scale customer-facing platforms. They foster a collaborative engineering culture where teams work together to build scalable, reliable, and impactful products.

Description

- Design, develop, and maintain web and mobile applications using React.js, React Native, Spring Boot, and Redis.
- Build scalable system architectures, APIs, and database solutions while ensuring performance, reliability, and security.
- Collaborate closely with Product Managers, Designers, and Engineers to deliver new features and exceptional user experiences.
- Drive development best practices, contribute to technical decisions, and support the growth of junior team members.

Job Offer

- Office Meals provided
- Opportunity to work in a well known organisation

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

Required Skills

- 6+ years of software development experience with strong expertise in React.js, React Native, JavaScript, TypeScript, Spring Boot, and Redis.
- Solid experience building scalable applications and integrating RESTful APIs and modern authentication mechanisms.
- Strong problem-solving skills with the ability to troubleshoot complex technical challenges and deliver high-quality solutions.
- Excellent English communication skills and experience working effectively in collaborative, cross-functional environments.
