Job Description

Join a critical engineering team responsible for building and maintaining core backend systems that power one of the largest e-commerce platforms in the world. This role focuses on developing high-performance APIs, order processing systems, and data services while ensuring reliability, scalability, and seamless customer experiences.

Client Details

A global technology company that operates large-scale digital commerce platforms serving millions of users. They are committed to delivering reliable, high-performance systems while fostering a culture of innovation, engineering excellence, and continuous improvement.

Description

- Design, develop, test, and release backend services, APIs, and batch processing systems aligned with business requirements.
- Develop and maintain critical systems supporting order management, cart functionality, and transaction processing in

high-traffic environments.
- Troubleshoot production issues, perform system maintenance, and ensure platform stability and reliability.
- Collaborate with engineers, QA teams, and product stakeholders to drive technical solutions, improve system performance, and deliver high-quality software.

Job Offer

- Competitive salry
- Opportunity to work in a well known company
- Office meals provided
