Job Description

We are looking for a **Senior SRE Engineer** to lead the infrastructure and reliability of large-scale mobility services, including real-time ride-hailing platforms and digital advertising systems.

As service competition accelerates, this role plays a critical part in ensuring both rapid feature development and high system stability.

You will take ownership of building and operating a modern AWS-based infrastructure that supports millions of users, while driving reliability, performance, and operational excellence.

This position offers the opportunity to work closely with product, design, and marketing teams, contributing to the creation of new mobility experiences from strategy to production.

Required Skills

- Lead the SRE function for server-side systems, ensuring stable, scalable, and secure operations

- Build and operate AWS-based infrastructure for large-scale ride-hailing and digital advertising services
- Balance development speed with high availability by designing resilient architectures and operational workflows
- Improve CI/CD pipelines and infrastructure automation using modern DevOps tools
- Enhance monitoring, observability, and incident response processes across distributed systems
- Collaborate with cross-functional teams to support rapid feature delivery and business growth
- Drive continuous improvement in system reliability, performance, and operational efficiency

Company Description
