Job Description

• BI system maintenance, development, and support for an automotive parts manufacturer.
• Support for system maintenance, development, and operations.

Position Highlights

- BI system maintenance & development for the automotive industry
- Future lead/coordinator role for incident management
- Global exposure with overseas teams
- Broad technical environment: AWS, Linux, Oracle, Power BI & Snowflake

Tasks & Responsibilites

- Primarily maintain and support information systems.
- Investigate and respond to customer inquiries.
- Perform system modifications based on customer requests.
- Create procedures for environment migration and setup, and carry out version upgrades.
- Depending on the area of responsibility, participate in meetings with overseas customers.
  (Currently, the existing team members speak only Japanese.)
- Tasks are expected to be divided among multiple team members.
- In the future, take a coordinating/lead role in incident triage, troubleshooting, and incident management.
- Act as a bridge and participate in meetings with overseas offices.

Technical Environment

- OS: Linux, Windows
- Databases: Oracle, Snowflake, etc.
- Languages: Bash, C Shell, Pro*C, VB6, etc.
- Tools: AWS, DataSpider, HULFT, Power BI, Yellowfin, etc.

Required Skills

Required Skills & Experience

- You will be expected to take a coordinating role in handling system incidents and related matters after several months.
- Experience in IT system development or system maintenance/support.
- Ability to work effectively while communicating with those around you.
- Ability to ask questions and consult with others when something is unclear.

Preferred Skills

- English conversation skills (everyday conversational level is acceptable).
- Technical skills: Linux, databases (Oracle, etc.), AWS, DataSpider, HULFT, Pro*C, VB6, Power BI, Yellowfin.
