Job Description

Our client is a publicly listed Japanese company building proprietary AI models and agent-based products for a specialized business domain. They're expanding into large enterprise solutions as they scale.

They are looking for someone with client-facing consulting or pre-sales experience, either in development/system implementation or business process transformation, who can bridge sales, customers, and development teams to turn business challenges into technical solutions.

What You Will Do

- > Assess technical feasibility and handle technical Q&A during client proposal meetings
- > Break down client business requirements into technical specs and proposal materials
- > Design PoC scope and implementation plans for AI agent projects
- > Collaborate with the development team on prioritization, requirements, and feedback loops

This role offers the chance to work on cutting-edge AI agent projects with major enterprise clients, direct influence over product development through client feedback, and a fast-growing, collaborative culture.

Why Join Them?

- > Cutting-edge AI work
 - > A collaborative space in the heart of Tokyo
 - > Full social insurance coverage and transportation expense reimbursement
 - > Stock ownership and trust stock option programs
 - > Visa Sponsorship for overseas applicants (subject to Japanese language ability)
-

Required Skills

Requirements:

- > Open to candidates from varied backgrounds — strong technical/development experience or strong business process/domain consulting experience are equally welcome, with role focus tailored to your strengths
- > Must have experience proposing to corporate clients and organizing their requirements into actionable improvements
- > Must have experience building consensus across multiple stakeholders (clients, internal teams, partners)

Bonus:

- > Either a systems/pre-sales background (Sler, IT consulting) or a business process/domain consulting background (BPO, process reform, ERP/SaaS implementation)
-
