Job Description

【求人No NJB2413059】
【仕事内容 / Job Description】
The role as Connectivity Platform Engineer you'll be in charge of:
Developing and operating front end and back end systems including databases servers and user facing applications.
Working on microservice architecture and Azure based services（e.g. ADX）to support customer portals and connectivity use cases.
Working on module development with a focus on service and storage layers.
Leading feature development and testing for diagnostics data services for electric and ICE vehicles aligned with vehicle

release schedules.
Collaborating with global stakeholders and cross functional teams for field validation support campaign execution and to ensure successful feature rollouts.
Design and implement migration approaches that minimize downtime and business impact.
Conducting system level debugging and root cause analysis for connectivity issues in vehicle ECUs.
Implementing system monitoring and automation to ensure reliability.
Performing operational and maintenance fixes for live products.

【部署の紹介 / Department Introduction】
As society around the world is transforming due to mega trends like digitalization electrification and autonomous driving as almost all commercial vehicle manufactures MFTBC is facing unknown challenges. MFTBC aims to be the frontrunner in the development and implementation of these technologies.
In order to achieve these targets MFTBC's Connectivity department turns vehicles into digital assets and enables or fully develops value added services for our customers. We are therefore pushing towards a digitalized future for our customers' industries. Working together with a team from all over the world that specializes in various fields such as Software Development Business Development Engineering and Logistics we are looking forward to welcome you in our team! You will work with the latest technologies to help our customers improve their operations and make society more sustainable. Today's product portfolio already includes Truckonnect BusConnect and the remote diagnostic solution Telediagnostics .
You'll be part of FUSO's software development team working on development and operations to enable data driven digital services for FUSO's inhouse solutions as well as to expand FUSO's digital services partner ecosystem.
