Job Description

A global automotive manufacturer is seeking an experienced **PMO** to support application development and engineering projects across vehicle software, electronics, and R&D. The role will coordinate projects across Japan and Germany, working closely with engineering, testing, and IT teams.

Responsibilities:

- Coordinate automotive software and application projects from requirements through development, testing, and release
- Track project schedules, milestones, deliverables, and issues
- Support testing readiness and software release planning
- Follow up on issues identified during vehicle testing and development
- Coordinate with Engineering, R&D, Testing, and IT teams
- Maintain project schedules, status reports, and tracking dashboards
- Support application migration, system development, and software implementation projects
- Coordinate with stakeholders across Japan, Germany, and partner organizations
- Support projects related to vehicle software, connectivity, ADAS, and cybersecurity

Why should you apply:

- Work on large-scale automotive engineering and software projects
- Collaborate with global teams across Japan and Germany
- Gain exposure to next-generation vehicle technologies
- Work with engineering, R&D, testing, and IT teams
- Opportunity for permanent employment after the initial contract period

Company Details:

Our client is a leading global commercial vehicle manufacturer with a strong presence in Japan and international markets. The company is investing heavily in next-generation vehicle technologies, including vehicle software, connectivity, ADAS, and automotive electronics, while working closely with global engineering teams and strategic partners.

Working Hours: 8:00–17:00 / 9:00–18:00, flexible working hours

Work Location: Kawasaki, Kanagawa

Holidays: Saturdays, Sundays, National Holidays, Year-end and New Year Holidays, Paid Holidays

Benefits: Transportation allowance, paid leave, social insurance, health insurance, pension, employment insurance, and regular health checkups

Interview Process: 2 interviews

Required Skills

- 7+ years of experience working on automotive industry projects
- Basic understanding of vehicle electronics, automotive software, or E&E systems
- Strong project coordination, tracking, and communication skills
- Experience working with engineering, testing, or IT teams
- Experience with Excel, JIRA, MS Project, or similar project tracking tools
- Strong follow-up and stakeholder management skills
- Ability to manage multiple projects and activities simultaneously

Languages:

- **Japanese:** N2 / Business level
- **English:** High-intermediate / Business level
