Job Description

- Join a product-focused engineering team as a Senior Application Engineer responsible for building and scaling proprietary solutions for the financial services industry.
- This role combines hands-on software development, technical leadership, and continuous improvement of agile product delivery processes.

Client Details

- Operates at the intersection of financial services, AI, data analytics, and digital transformation.
- Develops proprietary products while also supporting enterprise clients with technology and data initiatives.
- Fast-growing organization with a strong engineering culture and significant investment in AI-driven innovation.
- Focused on solving complex industry challenges through a combination of technology, product development, and community engagement.

Description

- Lead application development and technical decision-making for proprietary financial technology products.
- Provide architectural guidance, code reviews, and mentorship to engineering team members.
- Drive agile development practices, improve team processes, and support rapid experimentation from PoC to production.

- Collaborate closely with product and business stakeholders to deliver impactful solutions.

Job Offer

- Flexible work environment with full-flex hours and hybrid work arrangements.
- Opportunity to work with modern technologies including Generative AI, cloud-native platforms, and advanced development tools.
- Strong learning culture supported by technical study groups, research collaborations, conferences, certifications, and training programs.
- Exposure to high-impact projects that contribute to meaningful transformation across the financial industry.
- Comprehensive employee benefits designed to support health, career growth, and work-life balance.

Required Skills

- Degree in Computer Science, Engineering, or a related technical field, or equivalent experience.
- Strong hands-on software development background with experience leading engineering initiatives.
- Proficiency in one or more languages such as Python, Java, Go, C#, C++, Kotlin, or Rust.
- Experience with Git, CI/CD pipelines, and Agile development methodologies.
- Professional English communication skills and eligibility to work in Japan.
