Job Description

Company Overview

A Japanese company operating across Europe, focused on strengthening its organizational foundation for future business growth through data utilization and operational efficiency improvements.

Position Overview

This role will drive AI and data initiatives while building the foundation for future organizational growth and expansion.

Rather than serving as a traditional IT function, you will be responsible for designing and implementing AI and data management frameworks and embedding them into day-to-day business operations.

Background

To accelerate AI adoption and support future expansion across Europe and global markets, the company is strengthening its organizational capabilities and operational infrastructure.

Key Responsibilities

Develop and drive AI implementation and utilization strategies

Build and enhance business data management frameworks

Establish and maintain data governance practices

Design frameworks for leveraging AI agents in business operations

Lead business process automation initiatives

Develop and manage dashboards and reporting tools

Improve and optimize operational processes

Design and manage API integrations

Support automation of accounting, payment, and other administrative processes

Establish reporting environments and analytics tools for senior management

Requirements

Must-Have

Strong interest in AI tools and Generative AI technologies

Experience in business process improvement and automation

Experience in data management and data quality management

Professional working proficiency in English

Ability to work independently and proactively

Comfortable working in a dynamic, startup-like environment

Visa

Applicants must already hold a visa or work authorization allowing unrestricted full-time employment in the Netherlands
