## Job Description

**Position Highlights**

- Automotive Cybersecurity
- Global Project & English Communication
- System Planning & Project Management
- Hybrid Work in Nagoya
- Temp-to-Perm Opportunity

**Responsibilities / Tasks**
You will participate in a vehicle security-related service development project for a Japanese automobile manufacturer and be involved in the development and management of applications used globally.
You will gain experience in a wide range of tasks, from business planning and launch to the procurement and management of external personnel. There is also a career path to leading projects as a leader in the future, providing an environment where you can acquire a wide range of skills and experience as a business person.

**Expected Responsibilities**
You will participate in a mobility security project for a major Japanese automobile manufacturer.

Upstream Process PM for Security-Related Systems

- Stationed at the customer's development department, conducting business planning and system requirements definition with user departments.
- Communicating specifications to system development vendors and managing development.
- System risk assessment and penetration test planning.
- Adjusting system specifications with overseas customers.

Existing System Management and Operation

- Handling various applications and inquiries from user departments.
- Coordinating with development vendors, operation outsourcing partners, and internal customer relations regarding system operation.

Interpretation and Translation

- Provide interpretation and translation support for various meetings and business visitors, including interpretation at business dinners and other social events as needed.

**Expected Tasks**

- Manage and promote development projects as the primary person in charge of system development under client stakeholders.
- Communication and information sharing with internal and external stakeholders.
- Building and managing relationships with domestic and international clients. (*High Japanese language proficiency is required when dealing with domestic clients.)
- Hearing about problems and challenges faced by clients, conducting problem analysis in collaboration with the technical team, and explaining and proposing solutions developed by the technical team to clients.
- Business development according to client needs (service upselling, proposal of new products and services, etc.).
- Providing support for overseas clients during their visits to Japan, as needed.

**Other Information**

- Location: Nagoya City or Toyota City, Aichi Prefecture
- Working Hours: 9:00–17:45 (7 hours and 45 minutes of actual work, with a 60-minute break)
- Working Style: Hybrid (remote work approximately 1–2 days per week)
- Employment Type: Temp-to-perm
- Selection Process: Document screening → SPI test → Interviews (multiple rounds planned)

## Required Skills

**Must-Have Skills & Experience**

- Interpersonal communication skills
- As this job involves handling highly confidential information, the applicant must understand the importance of confidential information and be able to manage and handle it appropriately.

Qualifications

- English language proficiency (TOEIC 850 or higher) ※Able to provide interpretation and translation for various meetings and business visitors.

**Preferred Skill & Experience**

- Project management experience (2 years or more)
- Leader/sub-leader experience
- Knowledge of encrypted communications and PKI
- Experience dealing with overseas vendors and overseas customers

Qualifications

- Fundamental Information Technology Engineer Examination
- Certified Information Security Specialist

**Ideal Candidate Qualities**

- Strong communication skills and the ability to coordinate smoothly with stakeholders
- An interest in new technologies and areas of work, with a proactive approach to learning
- The ability to understand clients' challenges and needs, engage others, and take action toward solutions
- Someone who finds fulfillment in client communication and driving projects forward, as well as deepening their technical expertise
- An understanding of Japanese business practices and the ability to build long-term relationships with stakeholders in Japan and overseas
