Job Description

The client is looking for a Platform Engineer to join their ranks. Please find the job details below. This role is a 1-year direct contract with the client directly with opportunities to renew or convert to permanent basis.

KEY RESPONSIBILITIES

- Identify, develop, implement, maintain, administer, support and improve IT infrastructure and CI/CD platform that are used to support application development lifecycle.
- Collaborate with the Product Team to onboard new product to the platform and to improve the existing application development process.
- Collaborate with Infosec Team on implementing security best practices on the applications, IT infrastructure and CI/CD platform.
- Collaborate internally within DevSecOps Team as well as with other teams to improve IT infrastructure, CI/CD platform and processes used for application development lifecycle.

- Own, recover and improve from incidents.
- Manage procurement, from issuing requirements until award.
- Manage implementation projects outsourced to external vendors.
- Develop policies, procedures and tools that manage changes to IT infrastructure and CI/CD platform.
- Share the knowledge and know-how to others; work with other team members to adopt and improve DevOps culture.
- Manage and provision hosting environments through code and implement tools to do so.

THE IDEAL CANDIDATE

- Minimum 3 years of hands-on experience in installing, configuring and troubleshooting the following tools:
  - Operating system: Linux (Redhat/Ubuntu) and MS Windows
  - Scripting: Bash and PowerShell with python(optional)
  - Repository and Continuous Integration/Continuous Delivery: GitLab, MS VSTS, Git
  - Testing tool: Playwright
  - Container/Container Orchestration: Docker, Kubernetes, EKS and Helm Charts
  - Logging/Telemetry: Elastic and OTEL
  - Visualisations: Kibana
  - Security: Sonarqube, Gitlab SEP (Scan Execution Policy) and PEP (Pipeline Execution Policy).
  - Infrastructure as Code: Ansible, Terraform
  - Database: Redis, MS SQL Server and PostgreSQL
  - Cloud: AWS
- Knowledge in networking protocols and services (e.g. SFTP, DHCP, VLANs, routing, load balancer, etc) with hands-on experience troubleshooting network issues.
- Hands-on experience with application development using agile methodology.
- Experience in deploying micro-service application.
- Experience in Incident , Change , inventory and security and patch management.
- Knowledge in using AI code assistant, deploying gen AI capabilities (AIOps) or operating/managing AI agents.
- Strong interest, curiosity and ambition to embrace agentic capabilities for infrastructure and cloud operations.
- Knowledge of various open source technologies.
- Good team player and communicator, with strong analytical and problem-solving abilities
- Background in Computer Engineering/Computer Science preferred, candidate who demonstrate strong relevant experience and skill sets will be considered.
- Certifications in the above-mentioned tools on point 1, DevOps and/or application development using agile methodology would be advantageous.
- Good system troubleshooting skills.

If you have what it takes, please feel free to apply to this job post. Otherwise you can send an updated resume to irfan.m@jac-recruitment.com
