Job Description

About the Role

The QC Staff role offers an excellent opportunity to build expertise across technical, quality, and environmental functions within a professional engineering-focused environment. This position combines laboratory analysis, quality management, environmental reporting, and customer-focused technical support, making it ideal for candidates looking to develop a broad and rewarding career.

Responsibilities

- Conduct customer process analysis, evaluate paper samples, and participate in on-site machine inspection and monitoring activities.
- Perform laboratory evaluations and analyse paper quality to support technical assessments and customer requirements.

- Compile findings, prepare reports, and present technical results accurately and effectively.
- Carry out product blending and adjustment in laboratory settings, support production troubleshooting, and contribute to the research of new raw materials.
- Support the implementation and maintenance of the Quality Management System (QMS).
- Monitor product quality, manage quality control activities, and perform inspection and calibration of measuring equipment.
- Support the implementation of the Environmental Management System (EMS) and prepare environmental reports and related documentation.

Requirements

- Diploma or Bachelor's degree in an engineering-related field or above.
- Japanese language proficiency at JLPT N3 level or higher is required.
- Interest in technical, quality management, and environmental management activities.
- Ability to analyse data, prepare reports, and present findings clearly.
- Good communication and coordination skills when working with customers and internal stakeholders.
- Willingness to work in both laboratory and operational environments.
- No prior work experience is required.

About the Company
A company in the manufacturing industry is committed to maintaining high standards of technical excellence, quality management, and environmental responsibility. The organisation provides a professional working environment that supports continuous learning, operational improvement, and collaboration across specialised functions.
