Job Description

About the role

The Quality Engineer role offers an exciting opportunity to drive quality excellence, lead ISO 9001 implementation, and support continuous improvement across a manufacturing operation. This position combines hands-on quality engineering, customer and supplier engagement, and leadership responsibilities, making it ideal for a quality professional looking to play a key role in operational success and future growth.

Responsibilities

- Lead quality assurance activities across incoming materials, in-process production, and finished goods to ensure compliance with quality standards and specifications.
- Drive root cause analysis, corrective and preventive actions, and continuous improvement initiatives to reduce defects, rework, and customer complaints.

- Support the development, implementation, certification, and ongoing maintenance of an ISO 9001 quality management system.
- Partner with production, engineering, R&D, and supply chain teams to resolve quality issues, improve processes, and support new product introductions and validation activities.
- Build strong relationships with customers and suppliers through quality issue resolution, audits, investigations, and ongoing quality improvement programmes.
- Represent the quality function during customer audits, product approvals, certification activities, and post-delivery support.
- Lead, coach, and develop a small quality team while promoting quality awareness and standardisation across the organisation.

Requirements

- Bachelor's degree in Materials Science, Mechanical Engineering, Chemical Engineering, or a related discipline.
- Have from 3 years experience in quality engineering or manufacturing environments.
- Prefer experience managing a small team of approximately 10 to 15 employees.
- Practical experience in ISO 9001 implementation, maintenance, or audit activities.
- Strong knowledge of quality tools and methodologies, including SPC, MSA, FMEA, control charts, 8D, CAPA, and root cause analysis.
- Experience working with quality documentation, inspection standards, control plans, and standard operating procedures.
- Good written and verbal communication skills in English.
- Strong analytical thinking, problem-solving ability, attention to detail, and a proactive learning mindset.
- Experience within composites or plastics manufacturing would be advantageous.
- Understanding of thermoplastic materials and composite manufacturing processes is preferred.
- Exposure to material testing and characterisation, including tensile, flexural, and peel strength testing, would be beneficial.
- Familiarity with ERP systems or digital quality platforms such as QCBD, Microsoft Dynamics NAV, or D365 is an advantage.
- Prefer local persion is living in Nhon Trach/ Long Thanh (Don't have shuttle bus)
- Demonstrated potential to lead quality initiatives and contribute to organisational growth.

About the company

A company in the advanced manufacturing industry, this multinational organisation is committed to delivering high-quality products through strong operational standards, continuous improvement, and customer-focused solutions. With a collaborative working environment and a commitment to quality excellence, the company supports innovation, process improvement, and professional development across its operations.

Others:

- Working hours: 8:00 AM - 5:00 PM (Monday - Saturday).

  Overtime: Required when necessary (approximately 20 hours/month). Overtime compensation is provided.
