Job Description

o Lead the architecture design and evolution of next-generation platforms and mission-critical AWS environments.
o Design scalable, highly available, secure, resilient, and cost-optimized cloud-native solutions using AWS services and best practices.
o Partner with product and engineering teams to solve complex technical challenges and drive key architectural decisions.
o Build and standardize shared cloud platforms, reusable infrastructure, and governance frameworks that support multiple development teams.
o Drive Infrastructure as Code (Terraform), CI/CD automation, and Developer Experience improvements to accelerate software delivery.
o Establish and enhance SRE practices, including observability, monitoring, SLI/SLO management, incident response, and reliability engineering.
o Lead modernization initiatives, including migrating legacy AWS environments toward containerized and serverless architectures.
o Continuously optimize system performance, availability, operational efficiency, security, and cloud costs while supporting large-scale platform transformation.

If you know anybody who could be a good fit for the role, please feel free to refer them **here** and earn 100,000JPY when we're able to place them.
