Job Description

- Perform data analysis, profiling, quality assessments, and data mapping to support global business transformation initiatives.
- Identify data inconsistencies, duplication, and quality issues while driving governance, standardization, and process improvement efforts.
- Develop KPIs, metrics, and actionable insights that support data-driven decision making across the business.
- Design, maintain, and document data models, business rules, and governance standards aligned with enterprise architecture.
- Translate business requirements into scalable data solutions and analytical frameworks that address operational challenges.
- Partner closely with business stakeholders, project teams, and technical experts to align business and technology objectives.
- Support global supply chain and operational excellence projects, working with cross-functional teams across multiple regions.
- Collaborate with international teams, participating in workshops, transformation programs, and presenting insights in both Japanese and English.

If you know anybody who could be a good fit for the role, please feel free to refer them **here** and earn 100,000JPY when we're able to place them.
