Job Description

Join a large-scale technology organization as a senior-level Full Stack Engineer leading the design and delivery of mission-critical payment and incentive platforms. This position offers the opportunity to influence architecture, drive best practices, and develop highly scalable applications in a collaborative international environment.

Client Details

Our client is a leading global digital services and e-commerce organization operating large-scale technology platforms across multiple markets. The company invests heavily in innovation and provides engineers with the opportunity to work on high-traffic, business-critical systems serving millions of users.

Description

- Lead the design, development, and maintenance of secure, scalable, and high-performance full-stack applications.
- Develop backend services using Java, Spring Boot, and the Spring Framework.
- Design and maintain RESTful APIs for integration with internal and external systems.
- Build and enhance front-end components using React, JavaScript, HTML, and CSS.
- Ensure application security, performance, reliability, and maintainability.
- Design and optimize relational database structures and SQL queries.

- Apply software design patterns and engineering best practices to deliver clean and reusable code.
- Collaborate with product managers, engineers, and stakeholders to define requirements and deliver solutions.
- Participate in Agile development processes and code reviews.
- Contribute to technical leadership and continuous improvement initiatives.

Job Offer

- Opportunity to lead the design of enterprise-scale payment and incentive platforms.
- Exposure to modern full-stack technologies and cloud environments.
- International and collaborative engineering culture.
- Hybrid collaboration with experienced technology professionals.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

Required Skills

- Proven experience as a Full Stack Engineer, Software Engineer, or similar role.
- Strong hands-on experience with Java development.
- Deep expertise in Spring Boot and the Spring Framework.
- Strong SQL skills and experience with relational database design.
- Experience developing front-end applications using React and JavaScript.
- Good understanding of HTML, CSS, and modern front-end development practices.
- Experience with Git and software development lifecycle best practices.
- Familiarity with Agile delivery methodologies.
- Business-level English communication skills.

Preferred Qualifications:

- Experience developing or supporting e-commerce platforms.
- Experience with AWS or other cloud environments.
- Experience deploying and operating applications in cloud-based architectures.
- Previous experience in large-scale enterprise environments.
