Job Description

【求人No NJB2312169】
About the Role

As a SW Project Lead at Harman you are responsible for successfully running the Software part of our Telematic Projects and ensure project deliveries in time budget and quality. You are the face to the customer for all SW topics. You are orchestrating the virtual cross functional global SW project team.

What you will do

Deliver next generation Telematic Units to the customer.
Act as / Be the face to the customer for all SW related topics.
Orchestrate virtual cross functional global project teams.
Plan monitor control and track the software project to achieve the goals with respect to schedule effort product quality and process quality in a timely manner.
Represent the program internally and externally to senior management
What else

Assure that all software project team members understand the product understand their roles in the project organization and accept their responsibilities.
Define and establish software project management process and development lifecycle activities derived from HARMAN standard process considering project specific constraints and stakeholder needs.
Establish communication and synchronization with global cross functional teams involved in the project on a regular base.
Provide SW program status updates on a regular base. Represent the program internally and externally to senior management during program quality and operations reviews.
Create and update software project milestone schedule synchronized with program management customer and suppliers.
Identify SW development work products plan and monitor their regular release within SW Maturity Gate according to the defined software development lifecycle.

Required Skills

※書類選考時、英文レジュメの提出をお願い致します。

What You Need

University degree in engineering（Electrical Engineering Information Technology Computer Science） or Business Administration or appropriate graduation
Fluent Japanese（Level 2） and Business English.
Expert knowledge in project management and coordination in a globally distributed development environment（Waterfall Agile）.
Strong analytical and problem solving skills.
Global mindset teamwork in a multi location team enterprise approach.
Knowledge of process models（e.g. Automotive SPICER CMMI）.
Ability to understand complex systems to break down and structure into reasonable parts so dependencies become visible describable and thus manageable.
Proven and effective communication analytical judgment initiative and execution skills.
Team management with 10+ people directly or indirectly.
