Job Description

【Position Outline】
We are looking for a highly skilled Software Developer to design, develop, and maintain robust and scalable backend systems. You will play a key role in building high performance, resilient solutions that power our platform, collaborating closely with product and other engineering teams.

【Responsibilities】
● Design and develop high-quality, scalable, and maintainable backend services and APIs using Java and related frameworks for our affiliate platform, understanding both business demands and available system assets.
● Participate in the full web application development lifecycle, including architecture design, middleware selection, development, configuration, release, and system operations.
● Detect root causes of issues and collaborate with team members for proactive recovery, taking ownership of service/system stability.
● Propose new technologies and tools to improve system architecture, improve system capability and enhance development efficiency.

Required Skills:
● 5+ years of professional experience in web application development using Java and Spring.
● Proficiency in API development, including OpenAPI specifications, ORM frameworks, and database schema design.
● Experience with unit testing frameworks (e.g., JUnit).
● Ability to design system architectures and evaluate/integrate various open-source software (OSS).
● Bachelor's degree in Computer Science, Engineering, or a related technical field.

Desired Skills:
● Familiarity with cloud platforms, particularly Google Cloud Platform (GCP).
● Practical knowledge of system performance tuning across infrastructure, OS, database, middleware, and application

layers.
- Familiarity with containerization technologies (e.g., Docker, Kubernetes) and CI/CD pipelines (e.g., Jenkins).
- Experience in frontend development using technologies like TypeScript, React, and Material UI.

Languages:
English: Business level

Japanese: Business Level (N2 or above) to Native
