Job Description

We are looking for a hands-on Network Engineer to support a major Japanese bank as it moves from its Oracle-based core banking platform to a new in-house core banking system. This is a long-term transformation project of about 4–5 years.

This is an individual contributor role, not an architect or managerial position. You will join a team with senior network architects and handle day-to-day network operations and project work.

Responsibilities:
- Support the existing network infrastructure and day-to-day network operations
- Work closely with the core banking transformation project team
- Implement network designs and infrastructure activities under senior technical guidance
- Handle network configuration, troubleshooting and security-related tasks
- Coordinate with Japanese-speaking client stakeholders and internal technical teams
- Provide production support during releases or emergencies when required

Work Style: Hybrid, mostly remote with office visits 2–3 days per week
Location: Tokyo (near Hatchobori, Kayabacho and Tokyo stations)
Selection Process: Technical interview → Internal management interview (if required) → Client interview (may be waived) → Offer

Required Skills

Required:
- 8+ years of hands-on network engineering experience
- Strong understanding of networking concepts, infrastructure and architecture
- Hands-on experience with OSPF and BGP
- Experience in network implementation, configuration, troubleshooting and maintenance
- Knowledge of network security and infrastructure management
- Native-level Japanese for daily business and technical discussions

Preferred:
- Experience with Cisco networking equipment
- Understanding of network automation
- CCNP certification
- Banking or financial services (BFSI) project experience
- Business-level English
