Job Description

Join a high-performing engineering team delivering enterprise-scale digital transformation initiatives using modern Java technologies, microservices, and cloud-native platforms. This role offers the opportunity to influence architecture, mentor engineers, and drive engineering best practices in a collaborative international environment.

Client Details

Our client is a leading global technology-driven organization supporting large-scale enterprise transformation projects across multiple industries. With a strong focus on innovation, engineering excellence, and continuous improvement, the company provides an international and collaborative environment for experienced software professionals.

Description

- Design, develop, and maintain high-performance enterprise applications.
- Build and support scalable microservices architectures and distributed systems.
- Write clean, maintainable, and testable code aligned with SOLID principles.

- Support CI/CD pipelines, DevOps adoption, and cloud-native development initiatives.
- Collaborate closely with architects, product owners, and cross-functional stakeholders.
- Contribute to technical decision-making and system design discussions.
- Mentor junior engineers and help elevate overall engineering capability across the team.
- Drive continuous improvement in software development processes and delivery practices.

Job Offer

- Fixed-term contract.
- Competitive annual salary of JPY8.5-9M.
- Opportunity to contribute to large-scale digital transformation programs.
- Exposure to modern cloud-native technologies and engineering methodologies.
- Collaborative and international working environment.
- Strong culture of innovation, learning, and professional development.
- Opportunity to influence architecture and engineering standards.
- Career growth into senior technical and leadership positions.
- Work with cutting-edge technologies including Java, AWS, Kubernetes, Docker, and event-driven systems.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Estephany Sakae on +81366276091.

Required Skills

- 5+ years of software engineering experience.
- Strong hands-on development experience using Java.
- Proven experience designing and building microservices architectures.
- Strong understanding of system design and distributed systems concepts.
- Experience working in Agile development environments.
- Knowledge of CI/CD pipelines, DevOps practices, and automated testing frameworks.
- Professional-level English communication skills.
- Business-level Japanese communication skills.

Preferred Qualifications

- Experience with AWS, Kubernetes, and Docker.
- Exposure to event-driven architectures.
- Experience with observability, monitoring, logging, and performance optimization.
- Demonstrated technical leadership or mentoring experience.
