Minimum Experience Level
Over 3 years

Career Level
Mid Career

Minimum English Level
Fluent Level

Minimum Japanese Level
None

Minimum Education Level
Associate Degree/Diploma

Visa Status
No permission to work in Japan required

Job Description

Company Overview: One of the Japanese company specializing into software component development.

■ Job Overview

Develop and maintain commercial software components used by software developers worldwide to build their applications. Take on development and maintenance responsibility for the assigned component products as they are transferred to MTI in phases. Positions may be filled at Mid-level or Senior level based on demonstrated capability.

■ Key Responsibilities

■ Component Development & Maintenance

• Design, implement and maintain features, public APIs and internal modules of commercial component libraries.

• Investigate defects, analyze existing codebases and deliver reliable, maintainable fixes.

• Preserve backward compatibility and follow established architecture, coding standards and versioning policies.

• Improve the performance, memory efficiency, stability and security of the components.

• Support new platform and framework versions (e.g., new .NET releases) for the assigned products.

■ Quality & Release

• Write unit and integration tests and maintain automated regression test suites.

• Participate in code reviews, design reviews, CI/CD and release-readiness activities, including packaging and distribution.

• Investigate customer-reported issues in cooperation with technical support and support root-cause analysis.

■ Documentation & Developer Experience

• Create and update API references, samples, release notes and technical documentation for developers using the products.

• Document design decisions, build procedures and troubleshooting know-how.

■ Global Collaboration & Knowledge Transfer

• Work with engineers in the external partner during phased transition.

• Learn existing products and progressively assume greater ownership based on role level.

• Share knowledge and contribute to common engineering practices across the development organization.

Candidates must meet the following requirements:

• Commercial software development experience appropriate to the role level: typically 4+ years for Mid-level and 7+ years for Senior candidates.

• Strong hands-on proficiency in at least one relevant technology stack with C#/.NET or JavaScript/TypeScript.

• Solid understanding of object-oriented design, API design, debugging and automated testing.

• Ability to read, understand and safely modify large existing codebases.

• Experience with Git, code reviews and collaborative development workflows.

• Ability to read English technical documentation and communicate effectively in English.

• Practical experience with AI-assisted software development using tools such as OpenAI Codex or equivalent, with the ability to effectively leverage generative AI for code generation, debugging, refactoring, testing, documentation and code review.

Preferred Qualifications

• Experience developing reusable libraries, SDKs, frameworks or components used by other developers.

• Experience working on commercial software products with backward-compatibility and long-term maintenance requirements.

• Experience with NuGet packaging, multi-targeting (.NET Framework / .NET) and assembly versioning.

• Experience with performance profiling, memory optimization and multithreading.

• Experience with CI/CD, security scanning and code quality tools.

• Japanese language skills are a plus
