#### Job Description

Job functions:

As a member of the Applications Development Team, the objective of this position is to support industrial companies in an advisory and hands on capacity in the implementation of "Additive Manufacturing" topics.

### What you will be Doing:

-You are responsible for the implementation and management of consulting projects with renowned industrial companies (for example, mechanical engineering, consumer goods, automotive, etc.), with the aim of:

- \* Selection of existing parts / products for Additive Manufacturing applications
- \* Optimization of additive manufacturing production processes according to our methodology
- \* Efficient know-how transfer in order to enable the customer team in our technology

-You are a pioneer and coordinator for consulting relevant topics in your industrial-specific topic (for example, aerospace engineering, turbine technology, etc.)

-Standardization of customer-specific solutions and internal know-how transfer. This may involve translation and/or proof reading of English training materials into the local business language.

-Training of new and existing customers in selected Additive Minds topics

-Consultancy to customers and prospects regarding machine use and application, including by telephone and at customer sites

-Participation in development projects with internal and external partners

-Able to support Customers in out of spec level parts building

### Required Skills

University degree in industrial engineering or engineering and several years of experience in industrial companies or a technical consulting unit (ideally engineering or in the manufacturing sectors of industrial companies)

- Minimum 5 years of hands on experience in additive manufacturing or in a similar manufacturing technology, ideally in an industrial enterprise
- Several years of experience in the implementation of consulting projects
- Solid experience as a project or subproject manager, ideally with budget responsibility
- Excellent understanding of the link between business requirements and the use of manufacturing technologies in a production environment

Familiar with software such as NX, Solidworks, Proe, Moldflow, Moldex3D is a plus

- Basic knowledge in CAD and good three-dimensional design imaginations
- IT knowledge (PC, MS-Windows, Networks, MS-Office)
- Ability to work independently and being self-driven is a must
- You stand out due to very good analysis and excellent customer management skills
- You pave the way for innovation and characterized by a high willingness to question and improve solutions and processes on the customer's site
- You are fluent in English and Japanese and willing to travel worldwide
- Cultural understanding coupled with communication skills round off your profile
