募集要項

Job Description

We are looking for people who can be involved in design construction / operation maintenance work as a member of the position engineer team. In addition, we would like to have people join us who can communicate smoothly with our customers as well as those who can carry out their duties.

You will be responsible for the operation and maintenance of the company's infrastructure network and hosting server. Depending on your skills, you will also be involved in the design and construction of servers for various services. In addition, through technical support for inquiries from customers, you will also be responsible for responding from proposals to problem solving. In the future, we aim to operate and maintain the system 24 hours a day, 365 days a year.

スキル・資格

Required skill

- ・ Over 3 years of experience in building and operating a Linux server
- ・ Experience in troubleshooting and permanent support when a server or network failure occurs
- ・ Linux server and middleware (Apache, Mariadb, Postfix, Qmail, Dovecot, MySQL, PostgreSQL, etc.)
- ・ Experience creating operation tools (such as shell scripts for work automation) in scripting languages (JavaScript (Node.js), Typescript, Python, Perl, PHP, Bash, etc.)
- ・ Basic knowledge of networking Understanding (knowledge of TCP/IP, knowledge of protocols such as DNS, HTTP, etc.)

welcoming skills

- ・ Experience tuning Linux servers and middleware (Apache, Mariadb, Postfix, Qmail, Dovecot, MySQL, PostgreSQL, etc.)
- ・ Experience building and operating large-scale systems
- ・ Experience building and operating virtual environments (VMware, Xen, KVM, etc.)
- Experience in construction and operation of various network equipment (L2, L3, L4, L7, etc.)
- ・ Experience in various data center work (racking, wiring, etc.)
- ・ Experience in infrastructure design, standardization, operation design
- ・ Experience in negotiating with customers
- ・ Vendor experience Negotiation experience

★Location : Kyoto

★Remote OK, Flex time!
