## 募集要項

Our client, a leading financial services firm in Japan, is looking for an experienced **Full Stack Developer** to join their team. This role requires a **strong technical background**, at least 5 years of experience working with Japanese applications in financial services, and business-level Japanese proficiency (N3 or above).

This is a **hybrid position** offering flexibility, a competitive salary, and great benefits. Candidates **must be based in Japan** to apply.

# About the Role

Our client, a well-established company in the **financial sector**, is looking for an experienced **Full Stack Developer** to contribute to the development of next-generation financial applications. This role requires a **minimum of five years working** on **software development for financial systems in Japan**, along with **business-level Japanese proficiency (N3 or higher)**.

This is a **hybrid position**, allowing a balance between remote work and in-office collaboration. Candidates must **already be residing in Japan** to be considered.

## Responsibilities

- Design, build, and enhance enterprise financial applications, ensuring efficiency and security
- . Develop and optimize APIs and backend services for seamless integration
- . Work closely with system architects and engineers to improve platform scalability
- Maintain code quality through structured testing and best practices
- Troubleshoot issues, implement fixes, and optimize performance
- Collaborate with both technical and non-technical teams to drive product improvements
- . Stay up to date with industry standards in software development and cloud infrastructure

## スキル・資格

## Required Experience & Skills

- 5+ years of development experience in Japan within the financial services sector
- Japanese proficiency: N3 or higher (must be comfortable working in a Japanese-speaking environment)
- Proficiency in Full Stack Development , including:
  - Backend Technologies: Java, Spring Boot, Python
  - Frontend Frameworks: React, Angular, or similar
  - Database Systems: SQL/NoSQL
  - Cloud & Containers: Docker, Kubernetes
  - API Development: REST, SOAP, API Gateway
  - Messaging Systems: RabbitMQ, Azure Service Bus

#### **Preferred Qualifications**

- Prior experience with large-scale enterprise applications
- Familiarity with API management platforms (Apigee, APIM, etc.)
- Knowledge of security best practices in financial software

## Why Consider This Role?

- Hybrid workstyle a mix of remote flexibility and in-office collaboration
- . Work on high-impact financial platforms in a dynamic environment
- Attractive compensation and benefits
- Be part of a team using modern technology to solve real-world challenges

## How to Apply

Candidates **must already be living in Japan** and meet the experience requirements. If you're looking to work on challenging financial applications with a talented team, apply now!
