### 募集要項

#### Responsibility :

- Work closely with Developers, QA and DevOps
- Configure, document, optimize and support the components of the DevOps infrastructure
- Design and develop the business's infrastructure architecture
- Build automated deployments using configuration management technologies
- Provide support and maintain Production, Staging and Dev environments
- Conduct technology evaluations and research

#### Qualifications & Competences:

- Extensive hands-on experience with AWS infrastructure
- Strong background in Linux/Unix Administration, with a solid understanding of networking
- Knowledge of Docker and Kubernetes
- Experience organizing infrastructure and configuration as code using Ansible, CloudFormation, Terraform or equivalent
- Experience working with modern development pipelines using Bamboo, ArgoCD or similar tools
- Proficiency in code and scripting languages (Bash, Python)
- Ability to design systems from scratch and integrate components into existing designs

Requirement:

- Working knowledge and experience running PostgreSQL and/or MySQL databases in production, including basic installation, configuration and backup-restore operations
- Experience with Kafka, Redis, MongoDB
- Experience with OpenSearch (ELK)
