## 募集要項

## Key Responsibilities:

- **Design and Analysis:**  
Develop structural designs for various projects, including buildings, bridges, and other infrastructure, ensuring they can withstand loads and stresses.
- **CAD and Software:**  
Utilize computer-aided design software and structural analysis tools to create blueprints, models, and technical drawings.
- **Technical Drawings:**  
Prepare detailed drawings and specifications for construction, ensuring they meet project requirements and standards.
- **Material Selection:**  
Determine appropriate materials for structural elements, considering factors like cost, durability, and safety.
- **Collaboration:**

Work with engineers, architects, and contractors to develop designs and address project-specific challenges.

- **Site Visits and Inspections:**

Conduct site visits to inspect structures and ensure designs are implemented correctly, and to address potential issues.

- **Budget and Schedule:**

Support project management tasks, including budget planning and scheduling.

- **Problem Solving:**

Identify and resolve structural issues and concerns, providing technical guidance throughout the project.

- **Compliance:**

Ensure that designs meet relevant building codes, regulations, and safety standards
