募集要項

Join a fast-growing Japanese tech company using AI to tackle real-world social challenges. As a Platform Engineer, you'll play a key role in building the development infrastructure behind next-generation AI-powered business tools.

In this role, you'll lead engineering initiatives across frontend, backend, and cloud infrastructure—working directly with product managers and engineers to shape development strategy and deliver impactful, production-ready AI solutions.

Responsibilities will include:

- Define development plans and technical strategy in collaboration with product management
- Lead technology selection and architecture decisions across the platform
- Contribute hands-on to system design and development, spanning frontend, backend, and cloud infrastructure (AWS, Kubernetes, etc.)

- Oversee code quality through reviews and testing, ensuring long-term product stability and maintainability
- Manage team assignments and support the growth of engineering talent within the team

What's on offer:

- Salary in the range of 8M to 13M JPY, depending on skills and experience
- Be a key contributor to a platform expected to become a major revenue pillar for the company
- Technical scope – touch every layer of the stack, from cloud infrastructure to Go backend and TypeScript frontend
- Career Acceleration – join as a tech lead with responsibility for both strategy and hands-on development
- International collaboration- join a diverse, English-speaking engineering division with global perspectives
- Hybrid work style (1 day per week at the office), Flextime policy

スキル・資格

Required Skills and Experience:

- 3+ years of experience in cloud architecture and system development
- Hands-on experience with Kubernetes
- Proficiency in Go, with additional experience in Node.js or Python

Language Skills:

- Fluent Japanese (N1 or above) and Conversational English are required for this role
