募集要項

About the company

Join a rapidly growing startup in Japan’s thriving AI ecosystem, focused on building innovative, real-world applications of Generative AI. Backed by experienced founders and strong financial support, the company is developing next-generation SaaS products aimed at transforming industries such as marketing, enterprise productivity, and automation.

Why you should apply

- Join a fast-growing startup that’s building cutting-edge SaaS products powered by Generative AI
- Enjoy a flexible, hybrid working style that supports work-life balance
- Take advantage of Japanese language learning support and a range of other benefits to help you thrive professionally and personally

スキル・資格

Who are you

We're looking for an experienced Full Stack Engineer who can lead AI product development—building solutions that consumers will continue to choose, while solving a wide range of technical challenges along the way.

Requirements

- 4+ years of professional experience in software development
- Proficient in at least one back-end programming language, preferably Python
- Hands-on experience with cloud platforms, such as GCP
- Experience developing web applications using modern frameworks

Desired skills

- Strong interest in Generative AI and emerging AI technologies
- Experience building SaaS-based web applications
