## [Company Profile]

The startup company from Kyushu University is providing the world's first ESG evaluation service.

They provide 360-degree comprehensive ESG analysis, including human rights-related indicators such as forced labor and child labor.

It has become an ESG evaluation platform that traces the entire supply chain, and is used by a variety of leading companies in the energy, construction, and apparel industries.

The company completed its large-scale fundraising in May 2023 and is aiming for an IPO within the next few years.

**[Job Description]**

You will work as an AI engineer for their company's products at their company, which provides in-house developed ESG analysis services mainly for enterprise companies.

**[Attractiveness of the job]**

■This is a position where you can contribute from the perspective of IT solutions to "ESG," a social issue that cannot be avoided in aiming for a sustainable society.

■Although it is not listed, their in-house developed system is already being used by several enterprise companies and their market share is expanding.

■Currently, their system of judging ESG using AI is a fairly unique field that is unique to their company, so it will also lead to increasing your own market value.

**[Background of recruitment]**

For further business expansion.

**[Requirements]**

Those who have been involved in any part of the following experience and skills

- Programming skills
  - ・ Implementation of machine learning and data analysis using Python or R
  - ・ High-speed processing and system development in C++ or Java
