募集要項

This position is available only for people residing in Japan.

[Company Profile]
The startup company from Kyushu University is providing the world's first ESG evaluation service.
They provide 360-degree comprehensive ESG analysis, including human rights-related indicators such as forced labor and child labor.
It has become an ESG evaluation platform that traces the entire supply chain, and is used by a variety of leading companies in the energy, construction, and apparel industries.
The company completed its large-scale fundraising in May 2023 and is aiming for an IPO within the next few years.

[Job Description]
You will work as an AI engineer for their company's products at their company, which provides in-house developed ESG analysis services mainly for enterprise companies.

[Attractiveness of the job]
■This is a position where you can contribute from the perspective of IT solutions to "ESG," a social issue that cannot be avoided in aiming for a sustainable society.
■Although it is not listed, their in-house developed system is already being used by several enterprise companies and their market share is expanding.
■Currently, their system of judging ESG using AI is a fairly unique field that is unique to their company, so it will also lead to increasing your own market value.

[Background of recruitment]
For further business expansion.

[Requirements]
Those who have been involved in any part of the following experience and skills

●Programming skills
・Implementation of machine learning and data analysis using Python or R
・High-speed processing and system development in C++ or Java
・Database operations using SQL
・Use of Flask or FastAPI for API development
・Pytorch, tensorflow, or tree-based ML (XGB, LGM, SKlearn)
・Experience using GPUs
・Familiarity with the Linux operating system
●Basic knowledge of mathematics and statistics
●Master's degree in science
●Japanese ability: Those who can conduct interviews in Japanese

[Preferred requirements]
・People who can understand statistics
・Information science faculty/graduate school graduates who have studied machine learning (practical experience is not required)
・People with engineering experience who want to become AI engineers *Language/process/years of experience are not required
